# **1. INTRODUCTION**

## **Project Overview**

It is an AI based project where by seeing an image shape and colour it will predicate which item it is. When we click that image then it will show all it's nutritions, calories, calcium, fat, carbohadrades etc.

The food pattern is one of the modifiable factors for improving lifestyle and disease prevention. It is known that changes in diet have an effect on the evolution of chronic noncommunicable diseases (CNCD) of high prevalence, such as obesity, depression, anxiety, type 2 diabetes, and cardiovascular diseases. In order to prevent the CNCD, changing eating habits is strongly recommended. In addition, physical fitness, through systematized physical activities or that increase daily caloric expenditure, also contributes to the prevention of CNCD. Precision medicine, or precise health, is an approach for disease treatment and prevention that considers individual variability in genes, environment, and lifestyle. The applying of

precision medicine has been broadly improved by the recent development of the large-scale biologic database, powerful methods for characterizing patients, and the use of high and smart technology. It is important to consider the computational tools for analyzing large data sets and, in this way, health-care providers will depend on electronic clinical decision support to quickly make appropriate treatment decisions. Computer systems that have a certain degree of intelligence and human/expert independence to infer about the preexisting data, in order to support the decision, could be useful, since the data generated require rapid and reliable analysis from a large number of variables. Among the available computational tools, artificial intelligence (AI) has gained more and more attention recently, since it is able to learn and model linear and nonlinear relationships between variables by constructing an input-output mapping such that hidden and extremely useful information for decision-making is revealed and interpreted. Although AI is not yet widely used in the areas of nutrition and fitness, it was found that the current technology available (information technology,

several sensors, the use of nanotechnology and the advent of computers, iPhones, and smartphones) is favorable to the application of AI, since a large amount of data is collected by these technologies and, therefore, AI could be very useful in their mining. This chapter provides a discussion about the importance of nutrition and fitness for health and well-being; what is precision medicine, AI, precision nutrition, and precision fitness; how AI could help with precision nutrition and precision fitness; decision-making algorithm for nutritional meal planning/dietary menu planning; AI-based diet and supplements; AI used in genetic tests for precision nutrition and fitness; AI approach to nutritional meal planning for cancer, cardiovascular diseases, obesity, T2D patients; AI-based nutrition and fitness support systems and apps and some challenges and future perspectives.

## **Purpose**

The food pattern is one of the modifiable factors for improving lifestyle and disease prevention. It is

known that changes in diet have an effect on the evolution of chronic noncommunicable diseases (CNCD) of high prevalence, such as obesity, depression, anxiety, type 2 diabetes, and cardiovascular diseases. In order to prevent the CNCD, changing eating habits is strongly recommended. In addition, physical fitness, through systematized physical activities or that increase daily caloric expenditure, also contributes to the prevention of CNCD. Precision medicine, or precise health, is an approach for disease treatment and prevention that considers individual variability in genes, environment, and lifestyle. The applying of precision medicine has been broadly improved by the recent development of the large-scale biologic database, powerful methods for characterizing patients, and the use of high and smart technology. It is important to consider the computational tools for analyzing large data sets and, in this way, health-care providers will depend on electronic clinical decision support to quickly make appropriate treatment decisions. Computer systems that have a certain degree of intelligence and human/expert independence to infer about the preexisting data, in

order to support the decision, could be useful, since the data generated require rapid and reliable analysis from a large number of variables. Among the available computational tools, artificial intelligence (AI) has gained more and more attention recently, since it is able to learn and model linear and nonlinear relationships between variables by constructing an input-output mapping such that hidden and extremely useful information for decision-making is revealed and interpreted. Although AI is not yet widely used in the areas of nutrition and fitness, it was found that the current technology available (information technology, several sensors, the use of nanotechnology and the advent of computers, iPhones, and smartphones) is favorable to the application of AI, since a large amount of data is collected by these technologies and, therefore, AI could be very useful in their mining. This chapter provides a discussion about the importance of nutrition and fitness for health and well-being; what is precision medicine, AI, precision nutrition, and precision fitness; how AI could help with precision nutrition and precision fitness; decision-making algorithm for nutritional meal

planning/dietary menu planning; AI-based diet and supplements; AI used in genetic tests for precision nutrition and fitness; AI approach to nutritional meal planning for cancer, cardiovascular diseases, obesity, T2D patients; AI-based nutrition and fitness support systems and apps and some challenges and future perspectives.

## **2.1 LITERATURE SURVEY**

### **2.2 Existing problem**

Neutrino delivers nutrition-based data services and analytics to its users and wants to turn into a leading source of the nutrition-related platform. The platform employs NLP and mathematical models from the optimization theory as well as predictive analysis to enable individualized data compilation. The application relies on Artificial Intelligence to produce custom data related to smart calorie counter powered by AI. Their artificial intelligence learns an individual's tastes, preferences, and body type. All of this is packaged in a comprehensive nutrition and activity tracker.

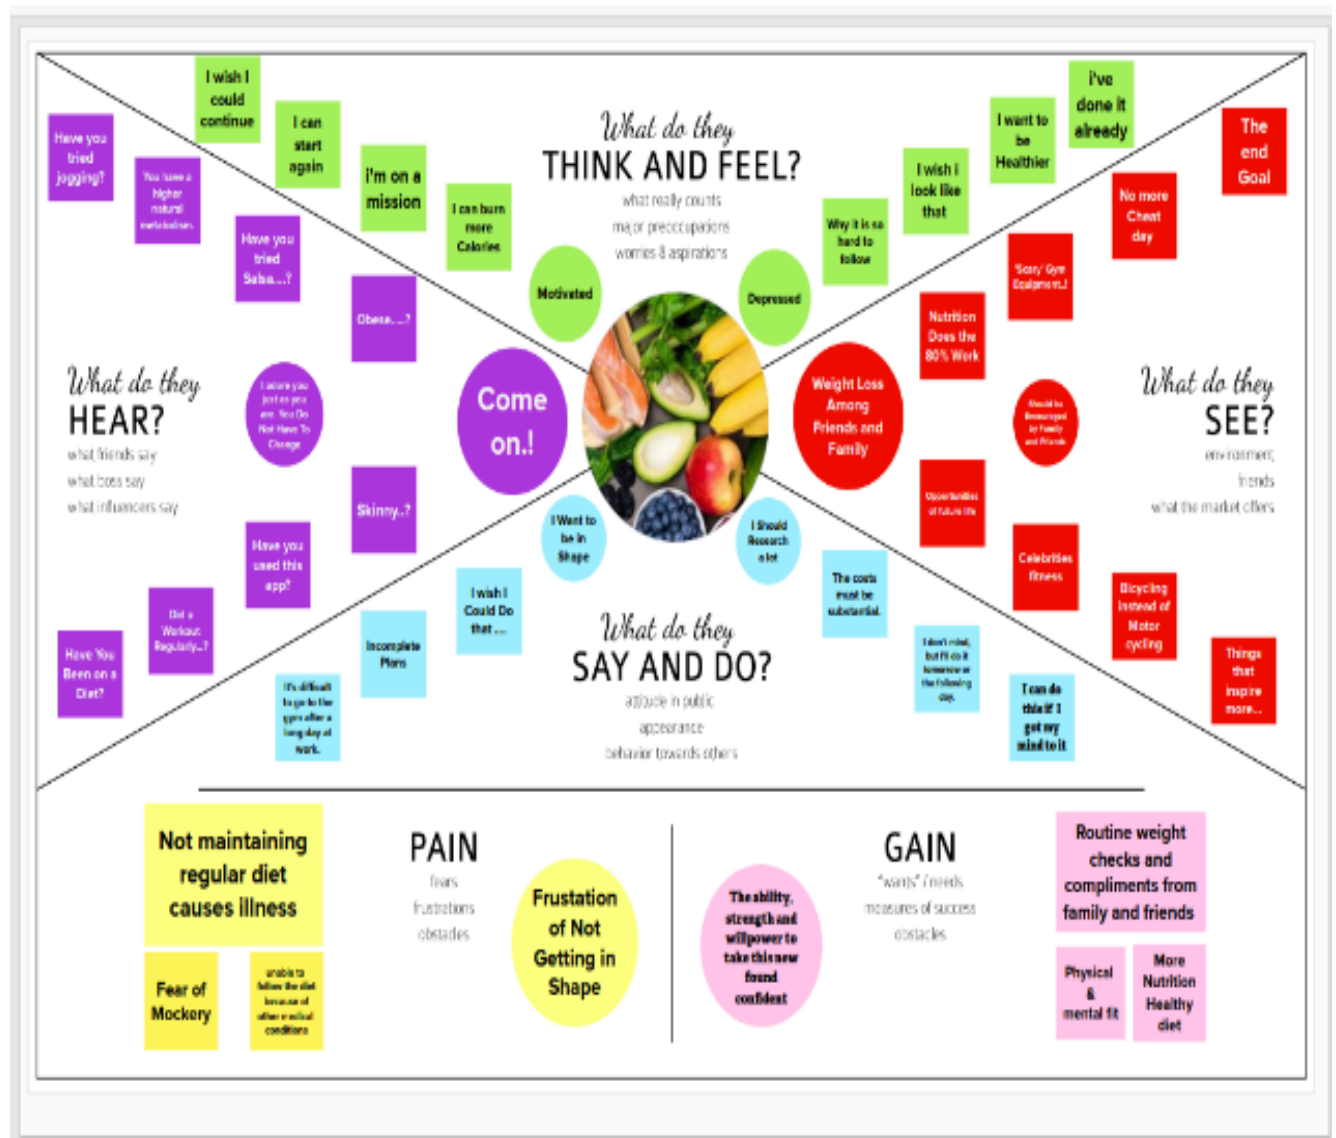

## **2.3 Problem Statement Definition**

Food is essential for human life and has been the concern of many healthcare conventions. Nowadays new dietary assessment and nutrition analysis tools enable more opportunities to help people understand their daily eating habits, exploring nutrition patterns and maintain a healthy diet. Nutritional analysis is the process of determining the nutritional content of food. It is a vital part of analytical chemistry that provides information about the chemical composition, contamination of food. The main aim of the project is to building a model which is used for classifying the fruit depends on the different characteristics like colour, shape, texture etc. Here the user can capture the images of different fruits and then the image will be sent the trained model. The model analyses the image and detect the nutrition based on the fruits like (Sugar, Fibre, Protein, Calories, etc.)

I am	The fitness Analyst, who is in need of an assistance to choose to my best food for my health based on nutrition.
I'm trying to	Use the recent technologies to check the nutrition of fruits and choose my consumption based on it.
But	I am unaware of the existing technology that can help me to guess the nutrition of various fruits for the given input.
Because	I don't want to make any wrong decision about nutrition.
Which makes me feel	I'm not capable of choosing the right food for the maintenance of my health, thus leading a healthy life.

# IDEATION & PROPOSED SOLUTION

## Empathy map

## Brainstorm & Idea prioritization

Use this template in your own brainstorming sessions to generate an unlimited number of ideas and select the most promising ones for further development.

- Brainstorming
- Idea selection
- Idea prioritization

**Before you start:**

- 1. Define the problem you want to solve.
- 2. Set the goal of your brainstorming session.
- 3. Set the time limit for your brainstorming session.

**Brainstorming:**

- 1. Generate as many ideas as possible.
- 2. Write down all ideas, no matter how silly or impractical they seem.
- 3. Do not criticize or judge any ideas during the brainstorming session.
- 4. Encourage everyone to participate and share their ideas.

**Idea selection:**

- 1. Review all ideas generated during the brainstorming session.
- 2. Select the most promising ideas based on the following criteria:

**Before you start:**

- 1. Define the problem you want to solve.
- 2. Set the goal of your brainstorming session.
- 3. Set the time limit for your brainstorming session.

**Brainstorming:**

- 1. Generate as many ideas as possible.
- 2. Write down all ideas, no matter how silly or impractical they seem.
- 3. Do not criticize or judge any ideas during the brainstorming session.
- 4. Encourage everyone to participate and share their ideas.

**Idea selection:**

- 1. Review all ideas generated during the brainstorming session.
- 2. Select the most promising ideas based on the following criteria:

**Before you start:**

- 1. Define the problem you want to solve.

## Ideation & Brainstorming

### **3 Proposed Solution**

- **Problem Statement (Problem to be solved)**

A regular person must use cutting-edge AI-based analyzing software to identify fruits and vegetables based on color, texture, form, and other characteristics. At the time of identification, the user must also be aware of the nutritional content of that specific edible.

- **Idea / Solution description**

**Main Solution:**

Clear and proper identification of the given input data.

Provide nutritional facts based on the obtained data.

Fitness analysis and maintenance as per the user's body conditions Additional benefits:

Analysis of daily dietary requirements

- **Novelty / Uniqueness**

The availability of fitness plans with add-on bonuses

Suggestion of home remedies and simple solutions for basic problems.

An individualized food plan based on health condition and deficiency.

Allowing for diet flexibility helps promote a healthy and effective eating pattern

- **Social Impact / Customer Satisfaction**

- Healthy lifestyle development

- Constant calorie management monitoring results in a fitness mindset.

- **Business Model (Revenue Model)**

- Consultation with nearest trainers and nutritionist for personalized plans.

- Adopt a specialized diet plan under the direction of an expert.

- Advertise and offer nutritional supplements and fitness gear.

- Promotion for fitness centers and hospitals.

- **Scalability of the Solution**

- Improving accuracy by expanding the data collection using user input data

- Storage requirements of a specific food.

- User friendly UI for everyone to use and get benefit from it

## **Problem Solution fit**

- Customer segment(s)
- Jobs-to-be-done/problem
- Triggers
- Emotions : before/after
- Customer constraints
- Available solution
- Problem root cause
- Behaviour
- Your solutions
- Channels of behaviour

## **4.REQUIREMENT ANALYSIS**

### **4.1 Functional requirement**

- It will generate the diet plan as well as monitor the user's health to classify the category of the disease and to create the diet plan. It will also reduce the cost of consulting the person nutritionist.
- The task of food detection/classification is not easy as it seems. All possible options related to the given Image.
- Image classification, object detection, segmentation, face recognition

- Classification of crystal structure using a convolutional neural network
- Nutrition is vital to the growth of the human body. Nutritional analysis guarantees that the meal meets the appropriate vitamin and mineral requirements, and the examination of nutrition in food aids in understanding the fat proportion, carbohydrate dilution, proteins, fiber, sugar, and so on. Another thing to keep in mind is not to exceed our daily calorie requirements
- Computer-Assisted Nutritional Recognize Food Images – In order to solve this issue, a brand- new Convolutional Neural Network (CNN)- based food picture identification system was created, as described in this study. We utilized our suggested strategy on two sets of actual food picture data.
- Here the user can capture the images of different fruits and then the image will be sent to the trained model. The model analyzes the image and detects the nutrition based on the fruits like (Sugar, Fiber, Protein, Calories, etc.)
- The Ultimate Workout at Home Solution This fitness AI software is designed with personalized training

regimens for each individual. It began as “gym only software,” but has now improved its system to satisfy “at home fitness” expectations.

- You take a picture, dial in data such as whether you are eating breakfast or lunch and add a quick text label, and the app estimates the calorie content.
- This software collaborated with IBM’s natural language capability to provide 24-hour assistance and dietary recommendations.

For Example:

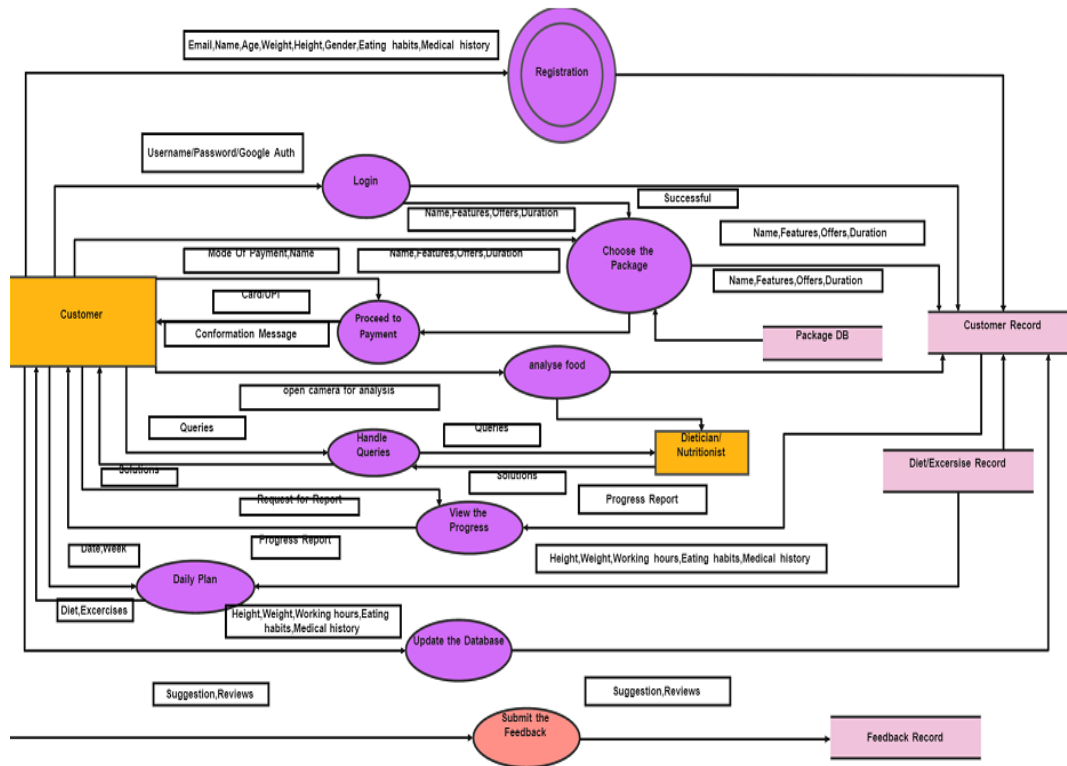

- The comparison of the proposed model with the conventional models shows that the results of this model are exceptionally good and promising to use in real-world applications.
- This sort of higher accuracy and precision will work to boost the machine’s general efficiency in fruit recognition more appropriately.

- A generic model for the dietary protein requirement (as with any nutrient) defines the requirement in terms of the needs of the organism
- i.e. metabolic demands, and the dietary amount which will satisfy those needs, i.e. efficiency of utilization, thus: dietary requirement = metabolic demand/efficiency of utilization.

# 5 PROJECT DESIGN

## 5.1 Data Flow Diagrams

## 5.2 Solution requirements (functional and non-functional) & Technical Architecture

### Functional Requirements:

#### ● User Registration

Registration through Form

Registration through Gmail

Registration through LinkedIn

- **User Confirmation**

Confirmation via Email Confirmation via OTP

- **User Login**

Login through Google Login through Email

- **Choose package**

Selection of desired package

- **Generate the daily plan**

Daily plans will be generated by dietician

- **Manage progress report**

Gathering information from database and generating report

- **Query**

The user can ask for changes in plan

## **Non-Functional Requirements**

- **Usability**

Easy to use with interactive User Interface

- **Security**

User can access only their personal information and not that of other users.

- **Reliability**

The average time of failure shall be 7 days

- **Performance**

The results has to be shown within 10 sec

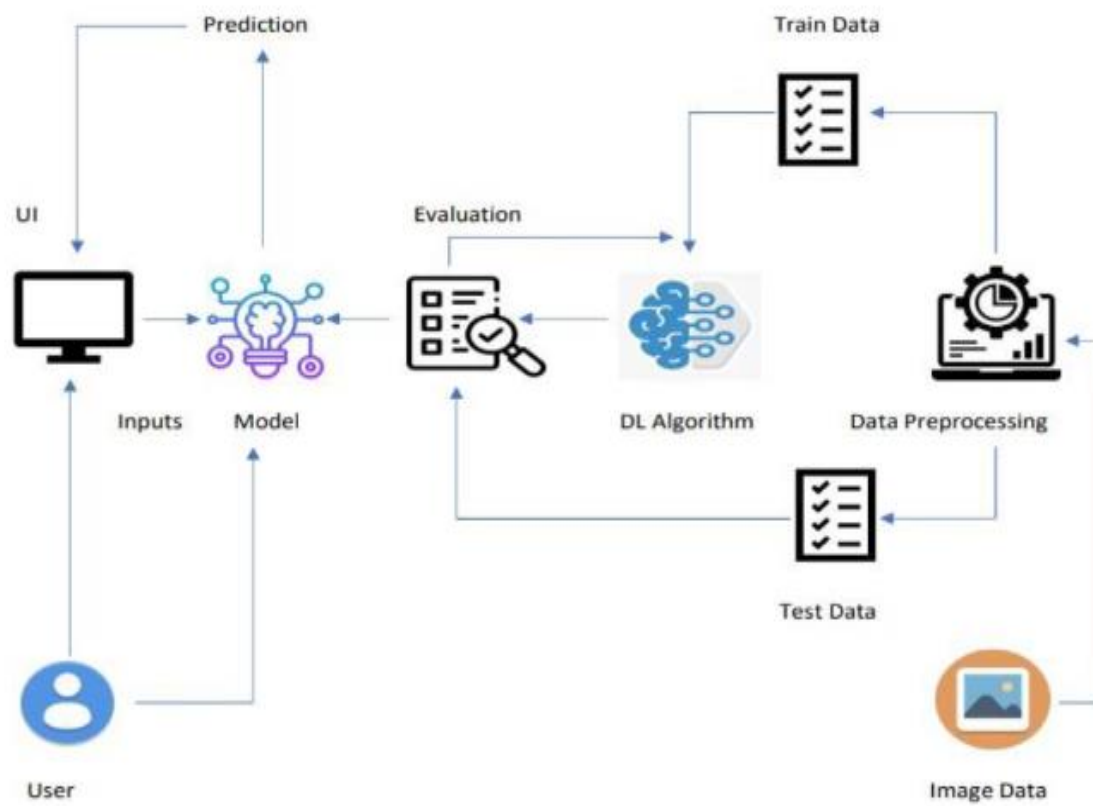

- **Availability**

The dietician shall be available to users 24 hours a day, 7 days a week.

- **Scalability**

Supports various food items

# Technical Architecture

## 5.4 User Stories

### User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	I can access my account / dashboard	High	Sprint-1
		USN-2	As a user, I will receive confirmation email once I have registered for the application	I can receive confirmation email & click confirm	High	Sprint-1
		USN-3	As a user, I can register for the application through Google	I can register & access the dashboard with Facebook Login	Low	Sprint-2
		USN-4	As a user, I can register for the application through Microsoft	I can access the Dashboard with Microsoft.	Medium	Sprint-1
	Login	USN-5	As a user, I can log into the application by entering email & password	I can login the Application by entering password	High	Sprint-1
	Main Interface	USN-6	As a user I can view my calorie intake by clicking photo of the food I eat	Access the proper information about the nutrition and the calorie intake	High	Sprint-2
	Package DB, Dashboard	USN-7	As a user I can choose variety of packages based on my requirement	Selecting an appropriate package	Medium	Sprint-2
Customer Care Executive	Feedbacks DB , Tollfree number, chat bot	USN-8	As a customer care executive, I collect feedbacks from customers	Maintaining proper environment for the customers	High	Sprint-2
Dietitian	Customer Record	USN-9	As a dietitian I provide daily plans for the betterment of the user	Positive results from user	High	Sprint-2
Administrator	Dashboard	USN-10	As an administrator I take care of all the operations which takes place in the app	Zero issues from the user	High	Sprint-2

# 6 PROJECT PLANNING & SCHEDULING

## 6.2 Sprint Planning & Estimation

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Pre- requisites forModel Building	USN-0	As a developer I have to collect different type of data possible and other data supporting the model	5	High	Padamata Tulasi Venkata srivarshini Jothika B Kuppam Harshita
Sprint-1		USN-1	As a user, I can register forthe application by entering my email, password, and confirming my password	5	High	Padamata Tulasi Venkata srivarshini Jothika B Kuppam Harshita
Sprint-1		USN-2	As a user, I will receive confirmation email once I have registered for the application	5	High	Padamata Tulasi Venkata srivarshini Jothika B Kuppam Harshita
Sprint-2		USN-3	As a user, I will receive confirmation email once I have registered for the application	3	Low	Padamata Tulasi Venkata srivarshini Jothika B Kuppam Harshita
Sprint-1		USN-4	As a user, I can register forthe application through Gmail	3	Medium	Padamata Tulasi Venkata srivarshini

						JothikaB Kuppam Harshita
Sprint-1	Login	USN-5	As a user, I can log into the application by entering email& password	5	High	Padamata Tulasi Venkata srivarshini Jothika B Kuppam Harshita
Sprint-2	Module building	USN-6	As a user, I can log into the application by entering email& password	5	High	Padamata Tulasi Venkata srivarshin Jothika B Kuppam Harshita
Sprint-2	Main Interface	USN-7	As a user I can view my calorie intake by clicking photo of the food I eat	5	High	Padamata Tulasi Venkata srivarshini Jothika B Kuppam Harshita
Sprint-2	Package, Dashboard	USN-8	As a user I can choose variety of packages basedon my requirement	4	Medium	Padamata Tulasi Venkata srivarshini Jothika B Kuppam Harshita

<b>Sprint</b>	<b>Functional Requirement (Epic)</b>	<b>User Story Number</b>	<b>User Story / Task</b>	<b>Story Points</b>	<b>Priority</b>	<b>Team Members</b>
Sprint - 3	Diet Plan for free users	USN - 9	As a dietitian I provide daily plans for the betterment of the user	5	High	Padamata Tulasi Venkata srivarshini Jothika B Kuppam Harshita
Sprint - 3	Personalized user food habit -based diet plan for premium users	USN - 10	As a Premium User, I can choose to follow diet plan based on my food habits or the generalized one	3	Medium	Padamata Tulasi Venkata srivarshini Jothika B Kuppam Harshita
Sprint - 2	User image Analysis	USN - 11	As a user I can track my calorie intake, and know about my food in detail.	5	High	Padamata Tulasi Venkata srivarshini Jothika B Kuppam Harshita
Sprint - 3	Improve efficiency of AI model	-	As a developer I have to give a better model that will analyse food precisely and provide accurate results	3	Medium	Padamata Tulasi Venkata srivarshini Jothika B Kuppam Harshita
Sprint - 2	User Analysis record	USN - 12	As a user, I can check the previous records and I can analyse my food habits	4	Medium	Padamata Tulasi Venkata srivarshini Jothika B Kuppam Harshita
Sprint - 4	Fitness tips and basic exercises	USN - 13	As a user I can follow some fitness tips and I can maintain weight as required	5	Medium	Padamata Tulasi Venkata srivarshini Jothika B Kuppam Harshita

Sprint - 4	Home remedies	USN - 14	As a user I can follow some natural home remedies for common diseases like (cold, cough ,fever ) and treat myself	5	High	Padamata Tulasi Venkata srivarshini Jothika B Kuppam Harshita
Sprint - 4	Optimize the user experience with the app		As a developer I have to provide clean and smooth interface to my user	5	High	Padamata Tulasi Venkata srivarshini Jothika B Kuppam Harshita
Sprint - 4	Payment Gateway for purchasing package		As a developer I have to create a environment which makes user feel ease to complete his/her Payments with various Payment options	3	Medium	Padamata Tulasi Venkata srivarshini Jothika B Kuppam Harshita

## 6.3 Sprint Delivery Schedule

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20ADD	6 Days	24 Oct 2022	29 Oct 2022	23	28 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022	26	04 Nov 2022
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022	11	11 Nov 2022
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022	18	17 Nov 2022

## 6.4 Reports from JIRA

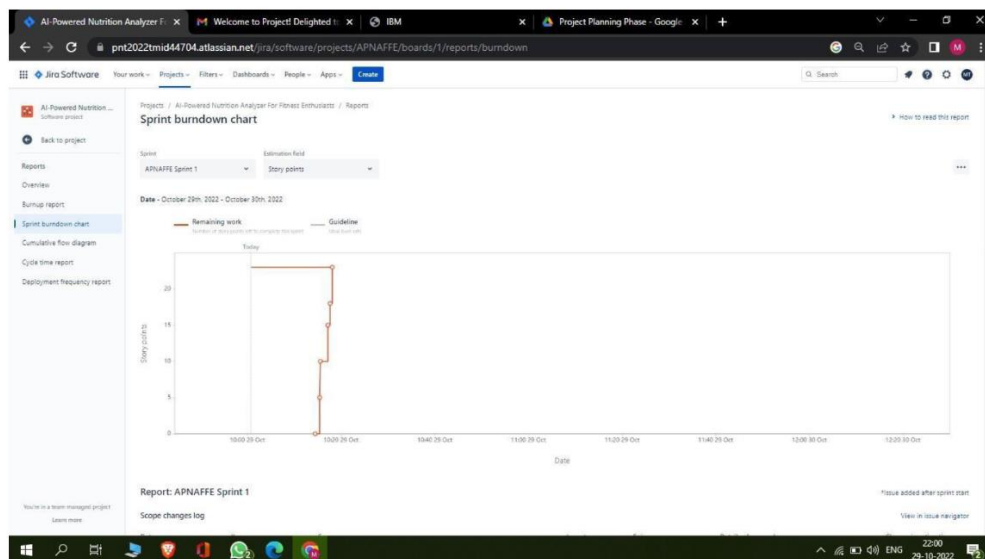

### Velocity:

Imagine we have a 10-day sprint duration, and the velocity of the team is 20 (points per sprint). Let's calculate the team's average velocity (AV) per iteration unit (story points per day)

$$AV = \text{Sprint duration} / \text{velocity} = 20 / 10 = 2$$

### Burndown Chart:

A burn down chart is a graphical representation of work left to do versus time. It is often used in agile software development methodologies such as Scrum. However, burn down charts can be applied to any project containing measurable progress over time.

## 7.1 Coding&Solutions(Explain the features added in the project along with code

import numpy as np #used for numerical analysis
from keras.models import Sequential, load_model#to load our trained model
from keras_preprocessing.image import image
import requests

app = Flask(__name__,template_folder="templates") # initializing a flask app
# Loading the model
model=load_model('nutrition.h5')
print("Loaded model from disk")

@app.route('/')# route to display the home page
def home():
    return render_template('home.html')#rendering the home page

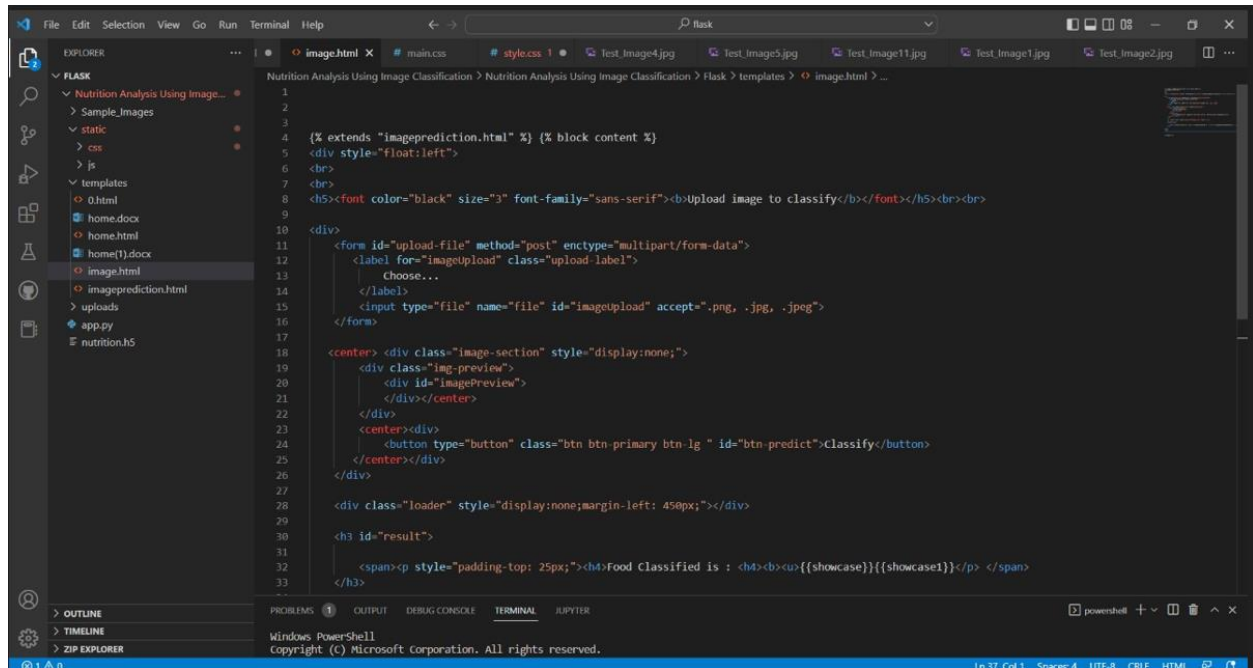

@app.route('/image1',methods=['GET','POST'])# routes to the index html
def image1():
    return render_template("image.html")

@app.route('/predict',methods=['GET', 'POST'])# route to show the predictions in a web UI

```

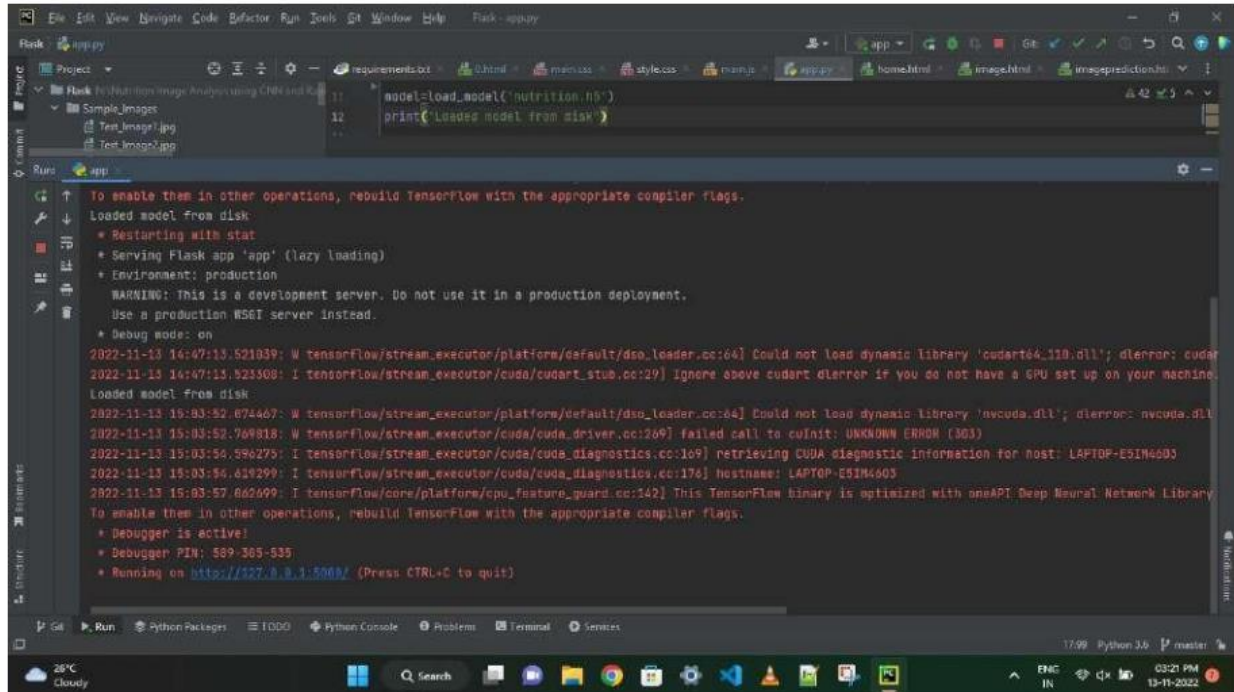

# 8 TESTING

## 8.1 Test Cases

# 9 RESULTS

## 9.1 Performance Metrics

The screenshot shows a Visual Studio Code editor with a Flask application. The file explorer on the left shows a project named 'Flask' with a subdirectory 'Sample\_Images' containing 'Test\_Image.jpg' and 'Test\_Image/app'. The code editor shows a Python file 'app.py' with the following code:

```
11 model=load_model('nutrition.h5')
12 print('Load model from disk')
```

The terminal window at the bottom shows the output of running the application. It includes the following messages:

- To enable them in other operations, rebuild TensorFlow with the appropriate compiler flags.
- Loaded model from disk
- \* Restarting with stat
- \* Serving Flask app 'app' (lazy loading)
- \* Environment: production
- WARNING: This is a development server. Do not use it in a production deployment.
- Use a production WSGI server instead.
- \* Debug mode: on

*Food is essential for human life and has been the concern of many healthcare conventions. Nowadays new dietary assessment and nutrition analysis tools enable more opportunities to help people understand their daily eating habits, exploring nutrition patterns and maintain a healthy diet. Nutritional analysis is the process of determining the nutritional content of food. It is a vital part of analytical chemistry that provides information about the chemical composition, processing, quality control and contamination of food. It ensures compliance with trade and food laws.*

## 10. ADVANTAGES & DISADVANTAGES

### **Advantages:**

One of the major goal of fruit image processing is to retrieve calorie and nutrient information from the given fruit image. In addition, automatic fruit recognition is beneficial to health care related applications, such as obesity management. They are capable of processing a real time application. Since the present smartphones can handle the high fruit image quality and focused on developing real time applications which capture image

then scan and automatically can detect the good quality of fruits. The system's main applications are:-

1. Eating a diet rich in vegetable and fruits as part of an overall healthy diet may reduce risk for heart disease.
2. Eating a diet rich in some vegetable and fruits as part of an overall healthy diet may protect against certain types of cancer.
3. Eating foods such as vegetables that are lower in calories per cup instead of some other higher calories food may be useful in helping to lower calories intake.

## **Disadvantages**

For this implementation AI also needs to operate on the latest hardware and software to stay updated and meet the latest requirements, thus making it quite costly. They can complete tasks they have been developed or programmed for, If they are asked to complete anything else, they frequently fail or provide useless results, which can have

significant negative effects. Thus unable to make anything conventional.

## **11.1 CONCLUSION**

By the end of this project we will

- Know fundamental concepts and techniques of Convolutional Neural Network.
- Gain a broad understanding of image data
- Know how to build a web application using the Flask framework.
- Know how to pre-process data and
- know how to clean the data using different data preprocessing techniques.

## **12.1 FUTURE SCOPE**

- AI is revolutionizing the health industry.
- It is majorly used in improving marketing and sales decisions, AI is now also being used to reshape individual habits.

- In future we don't want to go to gym and do any diets. By using this nutrition fitness analyzer we can maintain our diet plans without any help from others and we can lead a happy and healthy life with good wealth.
- AI can easily track health behaviors and repetitive exercise patterns and use the data to guide you towards your fitness journey and diet plans.
